How much could your organisation save by reducing or eliminating password resets?

What does the JSS SSO Plugin do?

The JSS SSO Plugin authenticates users into your ITSM system using their Windows logon credentials. The result? Users no longer need to remember a second password and save time by skipping that extra login stage.

How does the JSS SSO Plugin work?

Unlike other single sign on solutions in the marketplace; the JSS SSO Plugin does not store or reveal passwords. It seamlessly integrates systems from a users perspective.

Which of my applications does the JSS SSO Plugin integrate?

The JSS SSO Plugin supports a variety of applications including BMC ITSM, BMC ITBM, BMC Dashboards, BMC Analytics, HP Service Manager, HP Service Request Catalog and SAP Business Objects.

It integrates with products such as MS Active Directory, MS ADFS 2, Ping Federate, CA SiteMinder, RSA Access Manager (ClearTrust) and OpenID. For a full list of integrated products and those in development please visit the JSS website.

Is the JSS SSO Plugin easy to install and maintain?

The JSS SSO Plugin is designed to be easily installed and once running requires no further maintenance. For the few customers who come up against more technical issues, JSS include remote professional services in the purchase price.

Who are JSS?

Since 2006 the technical experts at JSS have been developing and implementing the unique offering that is the JSS SSO Plugin. Satisfied clients now include global household names such as Sony, Lockheed Martin and Deutsche Bank alongside numerous smaller local organisations.

How much does it cost to try JSS SSO Plugin?

JSS offers a free 60 day evaluation of the full JSS SSO Plugin product. So why not down load your copy today and see how your organisation can benefit by implementing single sign on in your organisation?

Apply for a free evaluation immediately.

What do our customers say?

"Since implementing the JSS SSO Plugin, password reset calls have reduced by 25%."

"Implementing the JSS SSO Plugin has proved a key part of our information security improvements, with a measurable reduction in users 'making a note' of passwords."

"The new integration with Business Objects has just eliminated the task of maintaining a separate user database for Business Objects."

"The service from JSS is excellent, we felt valued and important despite the comparatively low order value of our purchase."

"The pricing of the JSS SSO Plugin was impressive; especially when other consultants had quoted us in excess of 20 days onsite, for more complex solutions that would have delivered less functionality and required considerable on-going maintenance."
